Reflection on First Half of PROGCON

Through the duration of the midterm period, I learned a lot more in understanding and applying basic programming. We did several written activities and hands on machine projects to enhance our skills and help us develop our logical thinking and reasoning. At the same time, our professor helped us as she discussed lectures before we single handedly accomplish such activities.

Moreover, I am expecting for the finals period is a more complicated tasks however I think that it'll be more understandable for us since we already had a concept in our minds of what the basics are. Furthermore, new lessons are also expected and I am looking forward to learn and discover such upcoming lessons to further broaden the extent of my learning and interest in programming.
